CS 166 Database Management Systems
Instructor: P. Bakalov
Section 21
TA: Pranshu Shrivastava

In completing this assignment I consulted...

- RamaKrishnan & Gehrke.: Database Management Systems. 3rd Edition.

Assumptions

1. Created a C_id attribute which will uniquely identify each customer
2. Created a Service_ID which will uniquely identify each service request
3. We are assuming a mechanic can only work on one service request at a time, assuming each service request relates to one car only.
4. Assuming a car has only one owner
5. By using aggregation we are assuming a car, mechanic, and service request combined will have associated closing requests for the service requests
